

METHOD, SYSTEM, AND PROGRAM FOR
CHECKING CONTACT INFORMATION

ABSTRACT

5 Provided is a computer implemented method, system, and program for checking
text in an electronic document. Words in the text are scanned and parsed. For each set of
one or more scanned and parsed words, a determination is made of whether one or more
words form a contact phrase providing information to identify or address a person or
entity. After one contact phrase is scanned, contact information is accessed including
contact phrases. The contact information is searched to determine if the scanned contact
10 phrase matches contact phrases in the searched contact information.
